--	--	------------------------------------

NHS Grampian, Highland, Orkney, Shetland, Tayside and Western Isles have authorised this Patient Group Direction to help individuals by providing them with more convenient access to an efficient and clearly defined service within the NHS Boards. This Patient Group Direction cannot be used until Appendix 1 and 2 are completed.

Policy Statement:

It is the responsibility of the individual healthcare professional and their line managers to ensure that they work within the terms laid down in this PGD and to ensure that staff are working to the most up to date PGD. By doing so, the quality of the services offered will be maintained, and the chances of staff making erroneous decisions which may affect individual, staff or visitor safety and comfort will be reduced. Supervisory staff at all levels must ensure that staff using this PGD act within their own level of competence.

The lead author is responsible for the review of this PGD and for ensuring the PGD is updated in line with any changes in clinical practice, relevant guidelines, or new research evidence.

Review date: The review date for a PGD needs to be decided on a case-by-case basis in the interest of safety. The expiry date should not be more than 3 years, unless a change in national policy or update is required.

Document:	Drafted:	March 2022
	Completed:	June 2022
	Approved:	July 2022 (published – August 2022)
	Amended & reauthorized:	

Organisational Authorisations

This PGD is not legally valid until it has had the relevant organisational authorisation.

Liam Callaghan	Chief Pharmacist NHSWI
Jackie Agnew	Head of Community Pharmacy Services NHSH

Patient Group Direction for the Administration of Hepatitis A Vaccine for Travel by Approved Healthcare Professionals Working Within NHS Grampian, Highland, Orkney, Shetland, Tayside and Western Isles

Clinical indication to which this PGD applies

<p>Definition of situation/Condition</p>	<p>This Patient Group Direction (PGD) will authorise approved healthcare professionals as detailed in the characteristics of staff authorised to work under this PGD to administer Hepatitis A vaccine for active immunisation of individuals at high risk of contracting Hepatitis A related to travel.</p> <p>This PGD should be used in conjunction with the recommendations in the current British National Formulary (BNF), British National Formulary for Children (BNFC), The Green Book Chapter 17, TRAVAX, NaTHNaC and the individual Summary of Product Characteristics (SmPC).</p>
<p>Inclusion criteria</p>	<p>Adults and children over 1 year old who:</p> <ul style="list-style-type: none"> • Intend to travel to or reside in countries where hepatitis A vaccination is currently recommended for travel in accordance with national recommendations issued by TRAVAX www.travax.nhs.uk/destinations/ <p>The risk of exposure should be determined after careful risk assessment of an individual's itinerary, duration of stay, planned activities and medical history.</p> <p>Prior to the administration of the vaccine, valid consent to receiving treatment under this PGD must be obtained. Consent must be in line with current individual NHS Boards consent policy.</p>
<p>Exclusion criteria</p>	<p>Individuals who:</p> <ul style="list-style-type: none"> • Are under 1 year of age • Have had a confirmed anaphylactic reaction to a previous dose of any hepatitis A containing vaccine or to any components of the vaccine, these may include neomycin and/or formaldehyde (refer to relevant SmPC) • Have a history of severe (i.e. anaphylactic reaction) to latex where the vaccine is not latex free • Require vaccination unrelated to travel purposes • Are solely at occupational risk of hepatitis A exposure, should be referred to their employer's occupational health provider for vaccination • Have had a previous confirmed hepatitis A infection • Where there is no valid consent.

<p>Precautions and special warnings</p>	<p>Minor illness without fever or systemic upset is not a valid reason to postpone immunisation. If an individual is acutely unwell, immunisation may be postponed until they have fully recovered.</p> <p>The Green Book advises there are very few individuals who cannot receive hepatitis A containing vaccines. When there is doubt, appropriate advice should be sought from the lead clinician rather than withholding the vaccine.</p> <p>Individuals with immunosuppression and HIV infection can be given hepatitis A containing vaccines although seroconversion rates and antibody titre may be lower. Specialist advice may be required. Immunological response may be diminished in those receiving immunosuppressive treatment.</p> <p>The presence of a neurological condition is not a contraindication to immunisation but if there is evidence of current neurological deterioration, deferral of vaccination may be considered, to avoid incorrect attribution of any change in the underlying condition. The risk of such deferral should be balanced against the risk of the preventable infection, and vaccination should be promptly given once the diagnosis and/or the expected course of the condition becomes clear.</p> <p>There is no evidence of risk from vaccinating pregnant women, or those who are breast-feeding, with inactivated virus or bacterial vaccines or toxoids. Vaccination should be considered when the risk of infection is high and benefits are considered to outweigh the risks.</p>
<p>Action if excluded from treatment</p>	<p>Specialist advice must be sought on the vaccine and circumstances under which it could be given as immunisation using a patient specific direction may be indicated. The risk to the individual of not being immunised must be taken into account. Refer to the lead clinician.</p> <p>Advise the individual/parent/carer of preventative measures to reduce exposure to hepatitis A including careful attention to food and water hygiene and scrupulous hand washing.</p> <p>In case of postponement due to acute severe febrile illness, advise when the individual can be vaccinated at a later date and ensure another appointment is arranged.</p> <p>Individuals who have had a confirmed anaphylactic reaction to a previous dose of a hepatitis A containing vaccine or any components of the vaccine should be referred to a clinician for specialist advice and appropriate management.</p>

	Document the reason for exclusion under the PGD and any action taken in the individual's appropriate clinical records.
Action if treatment is declined	<p>Advise about the protective effects of the vaccine and the risk of infection and disease complications. Advise how future immunisation may be accessed if they subsequently decide to receive the vaccine. Ensure they have additional reading material e.g. the Patient Information Leaflet (PIL) available to print here. Document advice given and decision reached.</p> <p>Advise the individual/parent/carer of preventative measures to reduce exposure to hepatitis A including careful attention to food and water hygiene and scrupulous hand washing.</p> <p>Document that the administration of the vaccine was declined, the reason and advice given in appropriate clinical records.</p>

Description of vaccine available under the PGD

Name form and strength of vaccine	<p>Hepatitis A (inactivated) vaccine (adsorbed) as either:</p> <p>Havrix® Monodose® vaccine, Hepatitis A virus 1440 ELISA units in a pre-filled syringe or vial 1mL</p> <p>Havrix® Junior Monodose® vaccine, Hepatitis A virus 720 ELISA units in a pre-filled syringe or vial 0.5mL</p> <p>AVAXIM®, Hepatitis A virus, (GBM strain) 160 U*, suspension for injection in a pre-filled syringe 0.5mL</p> <p>VAQTA® Adult, Hepatitis A virus (strain CR 326F) 50 U* suspension for injection in a pre-filled syringe or vial 1mL</p> <p>VAQTA® Paediatric, Hepatitis A virus (strain CR 326F) 25 U* suspension for injection in a pre-filled syringe or vial 0.5mL</p> <p>*In the absence of an international standardised reference, the antigen content is expressed using an in-house method of the manufacturer.</p> <p>An appropriate vaccine product should be selected for the individual see Dosage/Maximum total dose section.</p> <p>All Hepatitis A vaccines can be used interchangeably and Havrix®, AVAXIM®, VAQTA® vaccines are all thiomersal free.</p>
Legal status	Hepatitis A vaccine is a Prescription-only Medicine (POM).

	<p>The vaccine should be stored according to the conditions detailed below. However, in the event of an inadvertent or unavoidable deviation of these conditions refer to NHS Board guidance on storage and handling of vaccines guidance. Where vaccine is assessed in accordance with these guidelines as appropriate for continued use, administration under this PGD is allowed.</p> <p>N.B. Administration of Havrix[®] Monodose or Havrix[®] Junior Monodose[®] by deep subcutaneous injection to individuals with a bleeding disorder is an off-label administration but is consistent with advice in Chapter 4 and Chapter 17 of “The Green Book”. The individual or the person with parental responsibility should be informed prior to the administration that the use is off-label. Licensed administration of another brand of hepatitis vaccine where available may be considered as an alternative.</p>																								
<p>Dosage/Maximum total dose</p>	<p>Dose of 0.5mL or 1.0mL per administration depending on the age of the individual and vaccine product used.</p> <table border="1" data-bbox="523 969 1423 1697"> <thead> <tr> <th>Vaccine product</th> <th>Ages</th> <th>Dose</th> <th>Volume</th> </tr> </thead> <tbody> <tr> <td>Havrix Monodose[®]</td> <td>16 years or over</td> <td>1440 ELISA units</td> <td>1.0mL</td> </tr> <tr> <td>Havrix Junior Monodose[®]</td> <td>One to 15 years</td> <td>720 ELISA units</td> <td>0.5mL</td> </tr> <tr> <td>Avaxim[®]</td> <td>16 years or over</td> <td>160 antigen units</td> <td>0.5mL</td> </tr> <tr> <td>Vaqta Adult[®]</td> <td>18 years or over</td> <td>50 units</td> <td>1.0mL</td> </tr> <tr> <td>Vaqta Paediatric[®]</td> <td>One to 17 years</td> <td>25 units</td> <td>0.5mL</td> </tr> </tbody> </table> <p>Primary immunisation: single dose (see table above).</p> <p>Vaccination should ideally occur at least 2 weeks prior to possible exposure to infection with hepatitis A.</p> <p>For travellers, vaccine should preferably be given at least two weeks before departure, but can be given up to the day of departure.</p>	Vaccine product	Ages	Dose	Volume	Havrix Monodose [®]	16 years or over	1440 ELISA units	1.0mL	Havrix Junior Monodose [®]	One to 15 years	720 ELISA units	0.5mL	Avaxim [®]	16 years or over	160 antigen units	0.5mL	Vaqta Adult [®]	18 years or over	50 units	1.0mL	Vaqta Paediatric [®]	One to 17 years	25 units	0.5mL
Vaccine product	Ages	Dose	Volume																						
Havrix Monodose [®]	16 years or over	1440 ELISA units	1.0mL																						
Havrix Junior Monodose [®]	One to 15 years	720 ELISA units	0.5mL																						
Avaxim [®]	16 years or over	160 antigen units	0.5mL																						
Vaqta Adult [®]	18 years or over	50 units	1.0mL																						
Vaqta Paediatric [®]	One to 17 years	25 units	0.5mL																						

	<p>Reinforcing Immunisation: For those who require prolonged or subsequent protection against infection caused by hepatitis A virus, a reinforcing booster dose of a hepatitis A containing vaccine should ideally be given 6-12 months after the first dose. If the booster dose is delayed beyond 12 months, the course does NOT need to be restarted as studies have shown boosting can occur even when the second dose is delayed for several years.</p> <p>Hepatitis A containing vaccines may be used interchangeably, as appropriate, to complete a course.</p> <p>Until further evidence is available on persistence of protective immunity, a further booster at 25 years is indicated for those at ongoing risk of hepatitis A.</p>
<p>Frequency of dose/Duration of treatment</p>	<p>See Dose/Maximum total dose.</p>
<p>Maximum or minimum treatment period</p>	<p>See Frequency of dose/Duration of treatment section above.</p>
<p>Route/Method of administration</p>	<p>Administer by intramuscular injection. The preferred site is the deltoid region of the upper arm. In small infants the anterolateral thigh may be used.</p> <p>For individuals with a bleeding disorder, vaccines normally given by an intramuscular route should be given in accordance with the recommendations in the 'Green Book' Chapter 4</p> <p>When administering at the same time as other vaccines care should be taken to ensure that the appropriate route of injection is used for each of the vaccinations. The vaccines should be given when possible in different limbs to allow monitoring of local reactions to the Hepatitis A vaccine. If given in the same limb they should be given at different sites at least 2.5cm apart (American Academy of Paediatrics 2003). The site at which each vaccine was administered should be noted in the individual's records.</p> <p>Shake before injection to obtain a homogeneous suspension. The vaccine should be visually inspected before administration for any foreign particulate matter.</p> <p>The vaccine should be visually inspected for particulate matter and discoloration prior to administration. In the event of any foreign particulate matter and/or variation of physical aspect being observed, do not administer the vaccine.</p>

	Vaccines can be used interchangeably.
Quantity to be administered	Dose of 0.5mL or 1.0mL per administration depending on the age of the individual and vaccine product used.
Storage requirements	<p>Vaccine will be stored in a temperature controlled refrigerator between +2°C and +8°C. Refrigerators should have maximum and minimum temperatures recorded daily. Do not freeze.</p> <p>Store in original packaging in order to protect from light. Individual NHS Board guidance on the storage, handling and cold chain in relation to vaccines must be observed. Likewise, individual NHS Board guidance in relation to waste management and the disposal of all spent, partially spent or unused vaccines must also be observed.</p> <p>In the event of an inadvertent or unavoidable deviation of these conditions, vaccine that has been stored outside the conditions stated above should be quarantined and risk assessed for suitability of continued off-label use or appropriate disposal.</p>
Follow-up (if applicable)	<p>Following immunisation patients should remain under observation in line with individual NHS Board policy.</p> <p>Individuals should not leave if they are feeling unwell without speaking to the healthcare professional who administered the vaccine first. If necessary a doctor or the individuals GP should be contacted for advice.</p> <p>Where proof of vaccination is required, a certificate, stamped vaccination booklet or equivalent must be supplied.</p>
Advice (Verbal)	<p>Advise individual/person with parental responsibility what to expect and what to do for minor and major reactions.</p> <p>Explain that to give long-lasting immunity to hepatitis A, dosing requires two injections at least six months apart.</p> <p>Advise the individual/parent/carer of preventative measures to reduce exposure to hepatitis A including careful attention to food and water hygiene and scrupulous hand washing.</p> <p>The individual/carer should be advised that hepatitis A vaccine will not prevent infection caused by other pathogens known to infect the liver such as hepatitis B, C and hepatitis E viruses.</p> <p>If serious adverse or persistent effects occur, the individual/person with parental responsibility should be advised</p>

	<p>to contact their GP/Accident and Emergency department/NHS24.</p> <p>When administration is postponed advise the individual/person with parental responsibility when to return for vaccination.</p> <p>If appropriate, advise the individual/person with parental responsibility when subsequent doses are due and if any follow up is required.</p>
<p>Advice (Written)</p>	<p>The PIL contained in the medicine(s) should be made available to the individual/person with parental responsibility. Where this is unavailable, or unsuitable, sufficient information should be given in a language that they can understand.</p> <p>Further information on travel health is available at https://www.fitfortravel.nhs.uk/home</p>
<p>Identifying and managing possible adverse reactions</p>	<p>Syncope (fainting) can occur following, or even before, any vaccination especially in adolescents as a psychogenic response to the needle injection. This can be accompanied by several neurological signs such as transient visual disturbance, paraesthesia and tonic-clonic limb movements during recovery.</p> <p>Adverse reactions to hepatitis A vaccines are usually mild and confined to the first few days after immunisation. The most commonly seen reactions are minor local injection site reactions such as hardening of the skin, oedema, pain and redness. A small painless nodule may form at the injection site.</p> <p>Other commonly reported reactions to hepatitis A vaccination include general symptoms such as fever, malaise, fatigue, irritability, drowsiness, headache, myalgia, arthralgia and gastrointestinal symptoms including nausea, vomiting, diarrhoea, abdominal pain and loss of appetite.</p> <p>As with all vaccines there is a very small possibility of anaphylaxis and facilities for its management must be available.</p> <p>This list is not exhaustive. Please also refer to current BNF/BNFC and manufacturers SmPC for details of all potential adverse reactions.</p> <p>BNF/BNFC: BNF British National Formulary - NICE BNF for Children British National Formulary - NICE</p>

	<p>SmPC/PIL/Risk Minimisation Material: Home - electronic medicines compendium (emc) MHRA Products Home RMM Directory - (emc)</p> <p>If an adverse reaction does occur give immediate treatment and inform relevant medical practitioner as soon as possible.</p> <p>Report any severe reactions using the Yellow Card System. Yellow Card Scheme - MHRA</p>
<p>Facilities and supplies required</p>	<p>The following are to be available at sites where the vaccine is to be administered:</p> <ul style="list-style-type: none"> • Pharmaceutical refrigerator (or a validated cool box for storing vaccine if mobile unit) • An acceptable level of privacy to respect individual’s right to confidentiality and safety • Basic airway resuscitation equipment (e.g. bag valve mask) • Immediate access to Epinephrine (Adrenaline) 1 in 1000 injection • Access to a working telephone • Another competent adult, who can summon urgent emergency support if required should ideally be present • Access to medical support (this may be via the telephone) • Approved equipment for the disposal of used materials • Clean and tidy work areas, including access to hand washing facilities or alcohol hand gel • A copy of this PGD in print or electronically

Characteristics of staff authorised to administer vaccine under PGD

<p>Professional qualifications</p>	<p>Those registered healthcare professionals that are listed and approved in legislation as able to operate under Patient Group Directions, as identified and included in individual Board immunisation delivery plans.</p>
<p>Specialist competencies</p>	<p>Approved by the organisation as:</p> <ul style="list-style-type: none"> • Competent to assess the individual’s/person with parental responsibilities capacity to understand the nature and purpose of vaccination in order to give or refuse consent • Competent to undertake administration of the vaccine and discuss issues related to vaccination • Competent in the handling and storage of vaccines, and management of the “cold chain” • Competent to work under this PGD.

<p>Ongoing training and competency</p>	<p>All professionals working under this PGD must:</p> <ul style="list-style-type: none"> • Have undertaken NoS PGD module training on TURAS Learn • Have attended basic life support training either face to face or online and updated in-line with individual Board requirements • Have undertaken immunisation training where available • Have undertaken NHS e-anaphylaxis training or equivalent which covers all aspects of the identification and management of anaphylaxis updated in-line with individual Board requirements • Maintain their skills, knowledge and their own professional level of competence in this area according to their individual Code of Professional Conduct • Have knowledge and familiarity of the following; <ul style="list-style-type: none"> ○ Current edition of the Green Book ○ SmPC for the vaccine to be administered in accordance with this PGD ○ Relevant policy relating to vaccine storage and immunisation procedures for use within their Health Board ○ Relevant Scottish Government Health Directorate advice including the relevant CMO letter(s).
<p>Responsibilities of professional manager(s)</p>	<p>Professional manager(s) will be responsible for;</p> <p>Ensuring that the current PGD is available to all staff providing care under this direction.</p> <p>Ensuring that staff have received adequate training in all areas relevant to this PGD and meet the requirements above.</p> <p>Maintain up to date record of all staff authorised to administer the vaccine specified in this direction.</p>

Documentation

<p>Authorisation of administration</p>	<p>Qualified health professionals working within NHS Grampian, Highland, Orkney, Shetland, Tayside and Western Isles listed and approved in legislation as able to operate under PGD can be authorised to administer the vaccine specified in this PGD in accordance with local delivery plans and by agreement at individual Board level as per the following:</p> <p>Nurses, midwives and health visitors can be authorised by their line manager.</p>
---	--

	<p>Pharmacists working within NHS Grampian, Highland, Orkney, Shetland, Tayside and Western Isles can be authorised to administer the medicine(s) specified in this PGD when they have completed local Board requirements for service registration.</p> <p>The following list of healthcare professionals can be authorised by their Line Manager, Head of Service or Vaccine Coordinator: Chiropodists, dental hygienists, dental therapists, dieticians, occupational therapists, optometrists, orthoptists, orthotist/prosthetists, paramedics, physiotherapists, podiatrists, radiographers and speech and language therapists.</p> <p>All authorised staff are required to read the PGD and sign the Agreement to Administer Medicines Under PGD (Appendix 1).</p> <p>A Certificate of Authorisation (Appendix 2) signed by the authorising professional/manager should be supplied. This should be held in the individual health professional's records, or as agreed within the individual Health Board.</p>
<p>Record of administration</p>	<p>An electronic or paper record for recording the screening of individuals and the subsequent administration, or not of the vaccine specified in this PGD must be completed in order to allow audit of practice. This should include as a minimum:</p> <ul style="list-style-type: none"> • Date and time of vaccine administration • Individuals name and CHI • Exclusion criteria, record why the vaccine was not administered (if applicable) • Record that valid consent to treatment under this PGD was obtained • The name, brand, dose, form, batch number, expiry date, route/site of the vaccination administered • Advice given, including advice given if excluded or declined treatment under this PGD • Signature and name in capital letters of the healthcare professional who administered the vaccine • Record of any adverse effects (advise individuals GP/relevant medical practitioner). <p>Depending on the clinical setting where administration is undertaken, the information should be recorded manually or electronically on the individual service specific system, as appropriate.</p> <ul style="list-style-type: none"> • Individual service specific systems.

<p>Audit</p>	<p>All records of the vaccine specified in this PGD will be filed with the normal records of medicines in each practice/service. A designated person within each practice/service where the PGD will be used will be responsible for annual audit to ensure a system of recording medicines administered under a PGD.</p>

Appendix 1

Healthcare Professional Agreement to Administer Vaccine Under Patient Group Direction

I: _____ (Insert name)

Working within: _____ e.g. Area, Practice

Agree to administer the vaccine contained within the following Patient Group Direction:

Patient Group Direction for the Administration of Hepatitis A Vaccine for Travel by Approved Healthcare Professionals Working Within NHS Grampian, Highland, Orkney, Shetland, Tayside and Western Isles

I have completed the appropriate training to my professional standards enabling me to administer the vaccine under the above direction. I agree not to act beyond my professional competence, nor out with the recommendations of the direction.

Signed: _____

Print Name: _____

Date: _____

Profession: _____

Professional Registration number/PIN _____

Appendix 2

**Healthcare Professionals Authorisation to Administer Vaccine
 Under Patient Group Direction**

The Lead manager/Professional of each clinical area is responsible for maintaining records of all clinical areas where this PGD is in use, and to whom it has been disseminated.

The Senior Nurse/Professional who approves a healthcare professional to administer the vaccine under this PGD is responsible for ensuring that he or she is competent, qualified and trained to do so, and for maintaining an up-to-date record of such approved persons.

The Healthcare Professional that is approved to administer the vaccine under this PGD is responsible for ensuring that he or she understands and is qualified, trained and competent to undertake the duties required. The approved person is also responsible for ensuring that administration is carried out within the terms of the direction, and according to his or her individual code of professional practice and conduct.

**Patient Group Direction for the Administration of Hepatitis A Vaccine for
 Travel by Approved Healthcare Professionals Working Within NHS
 Grampian, Highland, Orkney, Shetland, Tayside and Western Isles**
